

AD _____

Award Number: DAMD17-00-1-0692

TITLE: Low Melatonin Production During Adulthood: A Possible
Genetic Susceptibility Factor for Breast Cancer Incidence

PRINCIPAL INVESTIGATOR: Floyd H. Gilles, M.D.
Eugene Sobel, Ph.D.
Zoreh Davanipour, D.V.M., Ph.D.

CONTRACTING ORGANIZATION: The University of Southern California
Los Angeles, California 90089-9074

REPORT DATE: October 2002

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

PROGRESS REPORT

Low Melatonin Production during Adulthood: A Possible Genetic Susceptibility Factor for Breast Cancer Incidence

DAMD# 17-00-1-0692

Proposal# BC996138

HSRRB Log#A-10088

PI: Eugene Sobel, PhD

Co-PI: Zoreh Davanipour, DVM, PhD

USC PI: Floyd Gilles, MD

November 23, 2002

1. The study has been given a 1-year no cost extension – until September 30, 2003. Thank you.
2. To date, there have been 188 urine samples and epidemiologic questionnaires collected from 61 families.
3. Ninety-seven (97) urines samples have been run to assay overnight melatonin metabolite and creatinine production. Two 96-well kits have been purchased for the remaining samples and those to be obtained during this extension year.
4. Melatonin and creatinine production data for the 97 subjects, representing 28 families, have been computerized and edited. Preliminary computer analyses have been conducted.
5. The database for the epidemiologic questionnaire data has been established and data have begun to be computerized.
6. There are additional families who have agreed to participate, but for whom a convenient time to collect the data has not been determined.
7. Families are continuing to be recruited.
